

addalevel SL2K

SELF LEVELLING RESIN FLOOR COATING

The latest formulation of EP Addalevel is a 2 part self levelling solvent free seamless flow applied epoxy system incorporating special fillers.

SL2K is easy to use with just the right balance of fluidity and density that ensures it is a pleasure to work and gives a perfect finish every time.

mix it - pour it - spread it - (roll it) - let it cure

SL2K provides a seamless and watertight finish with good chemical resistance to alkalis, oils, fats and salts but has a limited resistance to high acid concentration.

SL2K can be pigmented in a colour of your choice, it has excellent wear resistance and provides a gloss surface on new or old concrete floors.

Initial cure at 20°C is 10-12 hours at a depth of 2mm, full cure is achieved in 7 days.
